

## Exceptional & Rich Canada 60™ Richter Factsheet

Inception date September 2023

### Description

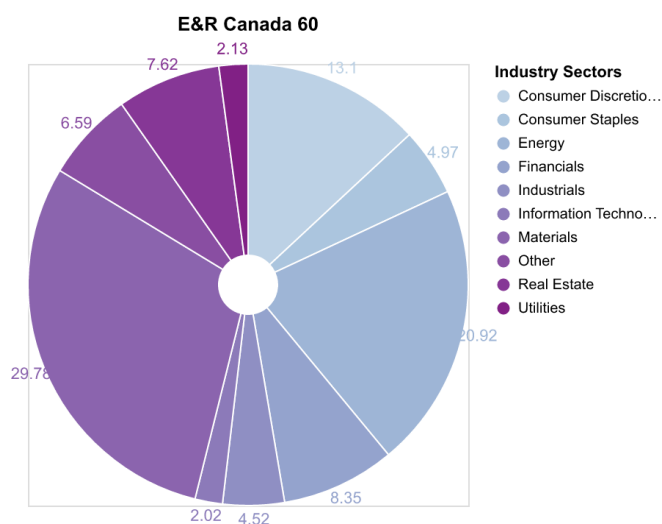

This factsheet was prepared based on the trial conducted for Richter Family Office. Exceptional & Rich Canada 60 Index [E&R Canada 60] has been created to improve the statistical and scientific design flaws of the market capitalization methodology used in the S&P TSX 60, which is widely regarded as the best single gauge of large-cap Canada equities. Unlike market capitalization methodology which is risk-increasing and return-reducing owing to its concentration, the E&R is designed to own 60 large-cap Canadian equities, and deliver higher risk-weighted excess returns while maintaining low tracking error vs. the S&P TSX 60.

### Methodology

The methodology is based on a modern science innovation, which uses Reversion-Divergence framework to dynamically score, weight and rebalance components in a group to deliver higher risk-weighted excess returns. The method removes the conflict between Efficient and Inefficient market thinking, statistically normal and non-normal behavior, or in simple terms the conflict between Value and Growth investing. The methodology is not Size biased, and obviates the need for concentration and running after winners but rather adopts a slower weight readjustment compared to the S&P TSX 60.
