

Exceptional & Rich U.S. 500™ Factsheet

AS OF JANUARY 13, 2023

Description

Exceptional & Rich U.S. 500 Index [E&R 500] has been created to improve the statistical and scientific design flaws of the market capitalization methodology used in the S&P 500, which is widely regarded as the best single gauge of large-cap U.S. equities. An estimated USD 15.6 trillion are indexed or benchmarked to the S&P 500, with Indexed assets comprising approximately USD 7.1 trillion (as of Dec. 31, 2021). Unlike market capitalization methodology which is risk-increasing and return-reducing owing to its concentration, the E&R is designed to own 500 large-cap U.S. equities, and deliver higher risk-weighted excess returns while maintaining low tracking error vs. the S&P 500.

Index Attributes

Launched on January 3, 2023, the E&R 500 leads a new generation of Smart Beta Indices that electronically delivers investable fund processes direct to Institutional and Individual investors. The lack of secondary market delivery is an essential attribute for the Index as it reduces the overall systematic risk inherent in Exchange Traded Funds today and allow the final investor to only pay-for-alpha above the S&P 500.

Methodology

The methodology is based on a modern science innovation, which uses Reversion-Divergence framework to dynamically score, weight and rebalance components in a group to deliver higher risk-weighted excess returns. The method removes the conflict between Efficient and Inefficient market thinking, statistically normal and non-normal behavior, or in simple terms the conflict between Value and Growth investing. The methodology is not Size biased, and obviates the need for concentration and running after winners but rather adopts a slower weight readjustment compared to the S&P 500.
